

CS 499 Topics in Artificial Intelligence Programming

Final Exam: Nov 9, 2022 (17:05 - 19:00)

No books, calculators, mobiles, laptops.

Do rough work (using **very small font**) on back sides only. Then plan and write *concise clear* answers within the space provided. No doubts allowed.

Qn. No.	1	2	3	4	5	Total (= 100)
Marks	20+1 ⇒ 21	14	18	16	17	86

1. (21 marks) Aditya, Bhaskar and Chandra took the Logic exam Using three proposition symbols (A,B,C) with meanings- A: "Aditya passed the exam", B: "Bhaskar passed the exam", and C: "Chandra passed the exam" represent each of the following sentences as a propositional logic formula. Simpler answers will get more marks.

(a) Chandra is the only one who passed.

$$\neg(A \wedge B) \wedge C \quad (3)$$

(b) Aditya is the only one who failed.

$$\neg A \wedge (B \wedge C) \quad (3)$$

(c) Only one of the three passed the exam.

$$(\neg A \wedge \neg B \wedge C) \vee (\neg A \wedge B \wedge \neg C) \vee (A \wedge \neg B \wedge \neg C) \quad (3)$$

↑ $(\neg A \wedge \neg B \wedge C)$ should be here.

(d) At least one of the three passed.

$$A \vee B \vee C \quad (3)$$

(e) At least two passed.

$$(A \wedge B \wedge C) \vee (A \wedge \neg B \wedge C) \vee (A \wedge B \wedge \neg C) \vee (\neg A \wedge B \wedge C) \quad (3)$$

(f) At most two passed.

$$(\neg A) \vee (\neg B) \vee (\neg C) \quad (3)$$

(g) Exactly two passed.

$$(A \wedge B \wedge \neg C) \vee (A \wedge \neg B \wedge C) \vee (\neg A \wedge B \wedge C) \quad (3)$$

①

A	B	C
0	0	0
0	0	1
0	1	0
0	1	1
1	0	0
1	0	1
1	1	0
1	1	1

(a) $\bar{A}\bar{B}C$

(b) $\bar{A}B\bar{C}$

(c) $\bar{A}\bar{B}C + \bar{A}B\bar{C} + A\bar{B}\bar{C}$ ✓

(d) $\bar{A}\bar{B}C + \bar{A}B\bar{C} + \dots$

$\dots + ABC$

(all terms ORed

except $\bar{A}\bar{B}\bar{C}$)

(e) $\bar{A}BC + A\bar{B}C + AB\bar{C}$

$+ ABC$

(f) $\bar{A}\bar{B}\bar{C} + \bar{A}\bar{B}C + \dots$

$\dots + \bar{A}B\bar{C}$ (all

terms ORed

except ABC)

(g) $\bar{A}BC + A\bar{B}C + AB\bar{C}$

Note :- $\bar{A} \equiv \neg A$

$A + B \equiv A \vee B$

$AB \equiv A \wedge B$

2. (14 marks)

Consider the following Prolog program (a,b,c are constants and p, q are predicates). List all the answers (in the correct order) for query $q(U, V)$.

$p(a, b).$
 $p(a, c).$
 $p(b, c).$
 $p(c, X) :- p(b, Z), p(a, X).$
 $q(X, Y) :- p(X, Y), p(Y, X).$
 $q(X, Y) :- p(X, X).$

(14)

Facts :- $p(a, b).$
 $p(a, c).$
 $p(b, c).$

Rules :-
 ① $p(c, X) :- p(b, Z), p(a, X).$ // this gives us $p(c, b)$ and $p(c, c)$
 ② $q(X, Y) :- p(X, Y), p(Y, X)$
 ③ $q(X, Y) :- p(X, X).$

$q(u, v)$
 \swarrow $p(u, v), p(v, u)$ \searrow ~~$p(u, u)$~~ v can be anything
 \downarrow Let $u=b$
 $v=c$
 $p(b, c), p(c, b)$
 satisfied as it is a fact it is true if $p(a, b)$ is true
 $\therefore p(a, b)$ is a fact $\Rightarrow p(c, b)$ is true

So, solution ① $\rightarrow u=b, v=c$ ✓

Now, we had $q(u, v)$ v can be anything
 \swarrow $p(u, v), p(v, u)$ \searrow ~~$p(u, u)$~~
 \downarrow Let $u=c$
 $v=b$
 $p(c, b), p(b, c)$
 both are true (shown earlier)

So, solution ② $\rightarrow u=c, v=b$ ✓

Now, we had $q(u, v)$ v can be anything

\swarrow $p(u, v), p(v, u)$ \searrow $p(u, u)$

$\downarrow v = u$

$p(u, u), p(u, u)$

\downarrow $p(u, u)$

\downarrow let $u = c$

$p(c, c)$

This is true

$\because p(a, c)$ is a fact

and $p(c, x) :- p(b, z), p(a, x)$ is a rule

So, $p(c, c)$ will be satisfied (put $x = c$)

So, solⁿ ~~2~~ ③ $\rightarrow v = u, u = c$ ✓

Now, we had $q(u, v)$

v can be anything

\swarrow $p(u, v), p(v, u)$
(all options
are exhausted
under this node)

\searrow $p(u, u)$

$\downarrow u = c$

$p(c, c)$

This is true
(proved above)

So, solⁿ ④ $\rightarrow u = c$ (This means v can
take any value
when $u = c$) ✓

14

3. (25 marks) Consider the following Prolog program.

$\text{pr}(N, [X, Y]) :- N > 0, N1 \text{ is } N - 1, \text{pr}(N1, [X, Y]).$
 $\text{pr}(N, [X, Y]) :- N > 0, \text{mysplit}(N, X, Y).$

18

① $\text{mysplit}(0, 0, 0).$

② $\text{mysplit}(N, 0, N) :- N > 0.$

③ $\text{mysplit}(N, X, Y) :- N > 0, N1 \text{ is } N-1, \text{mysplit}(N1, X1, Y), X \text{ is } X1 + 1.$

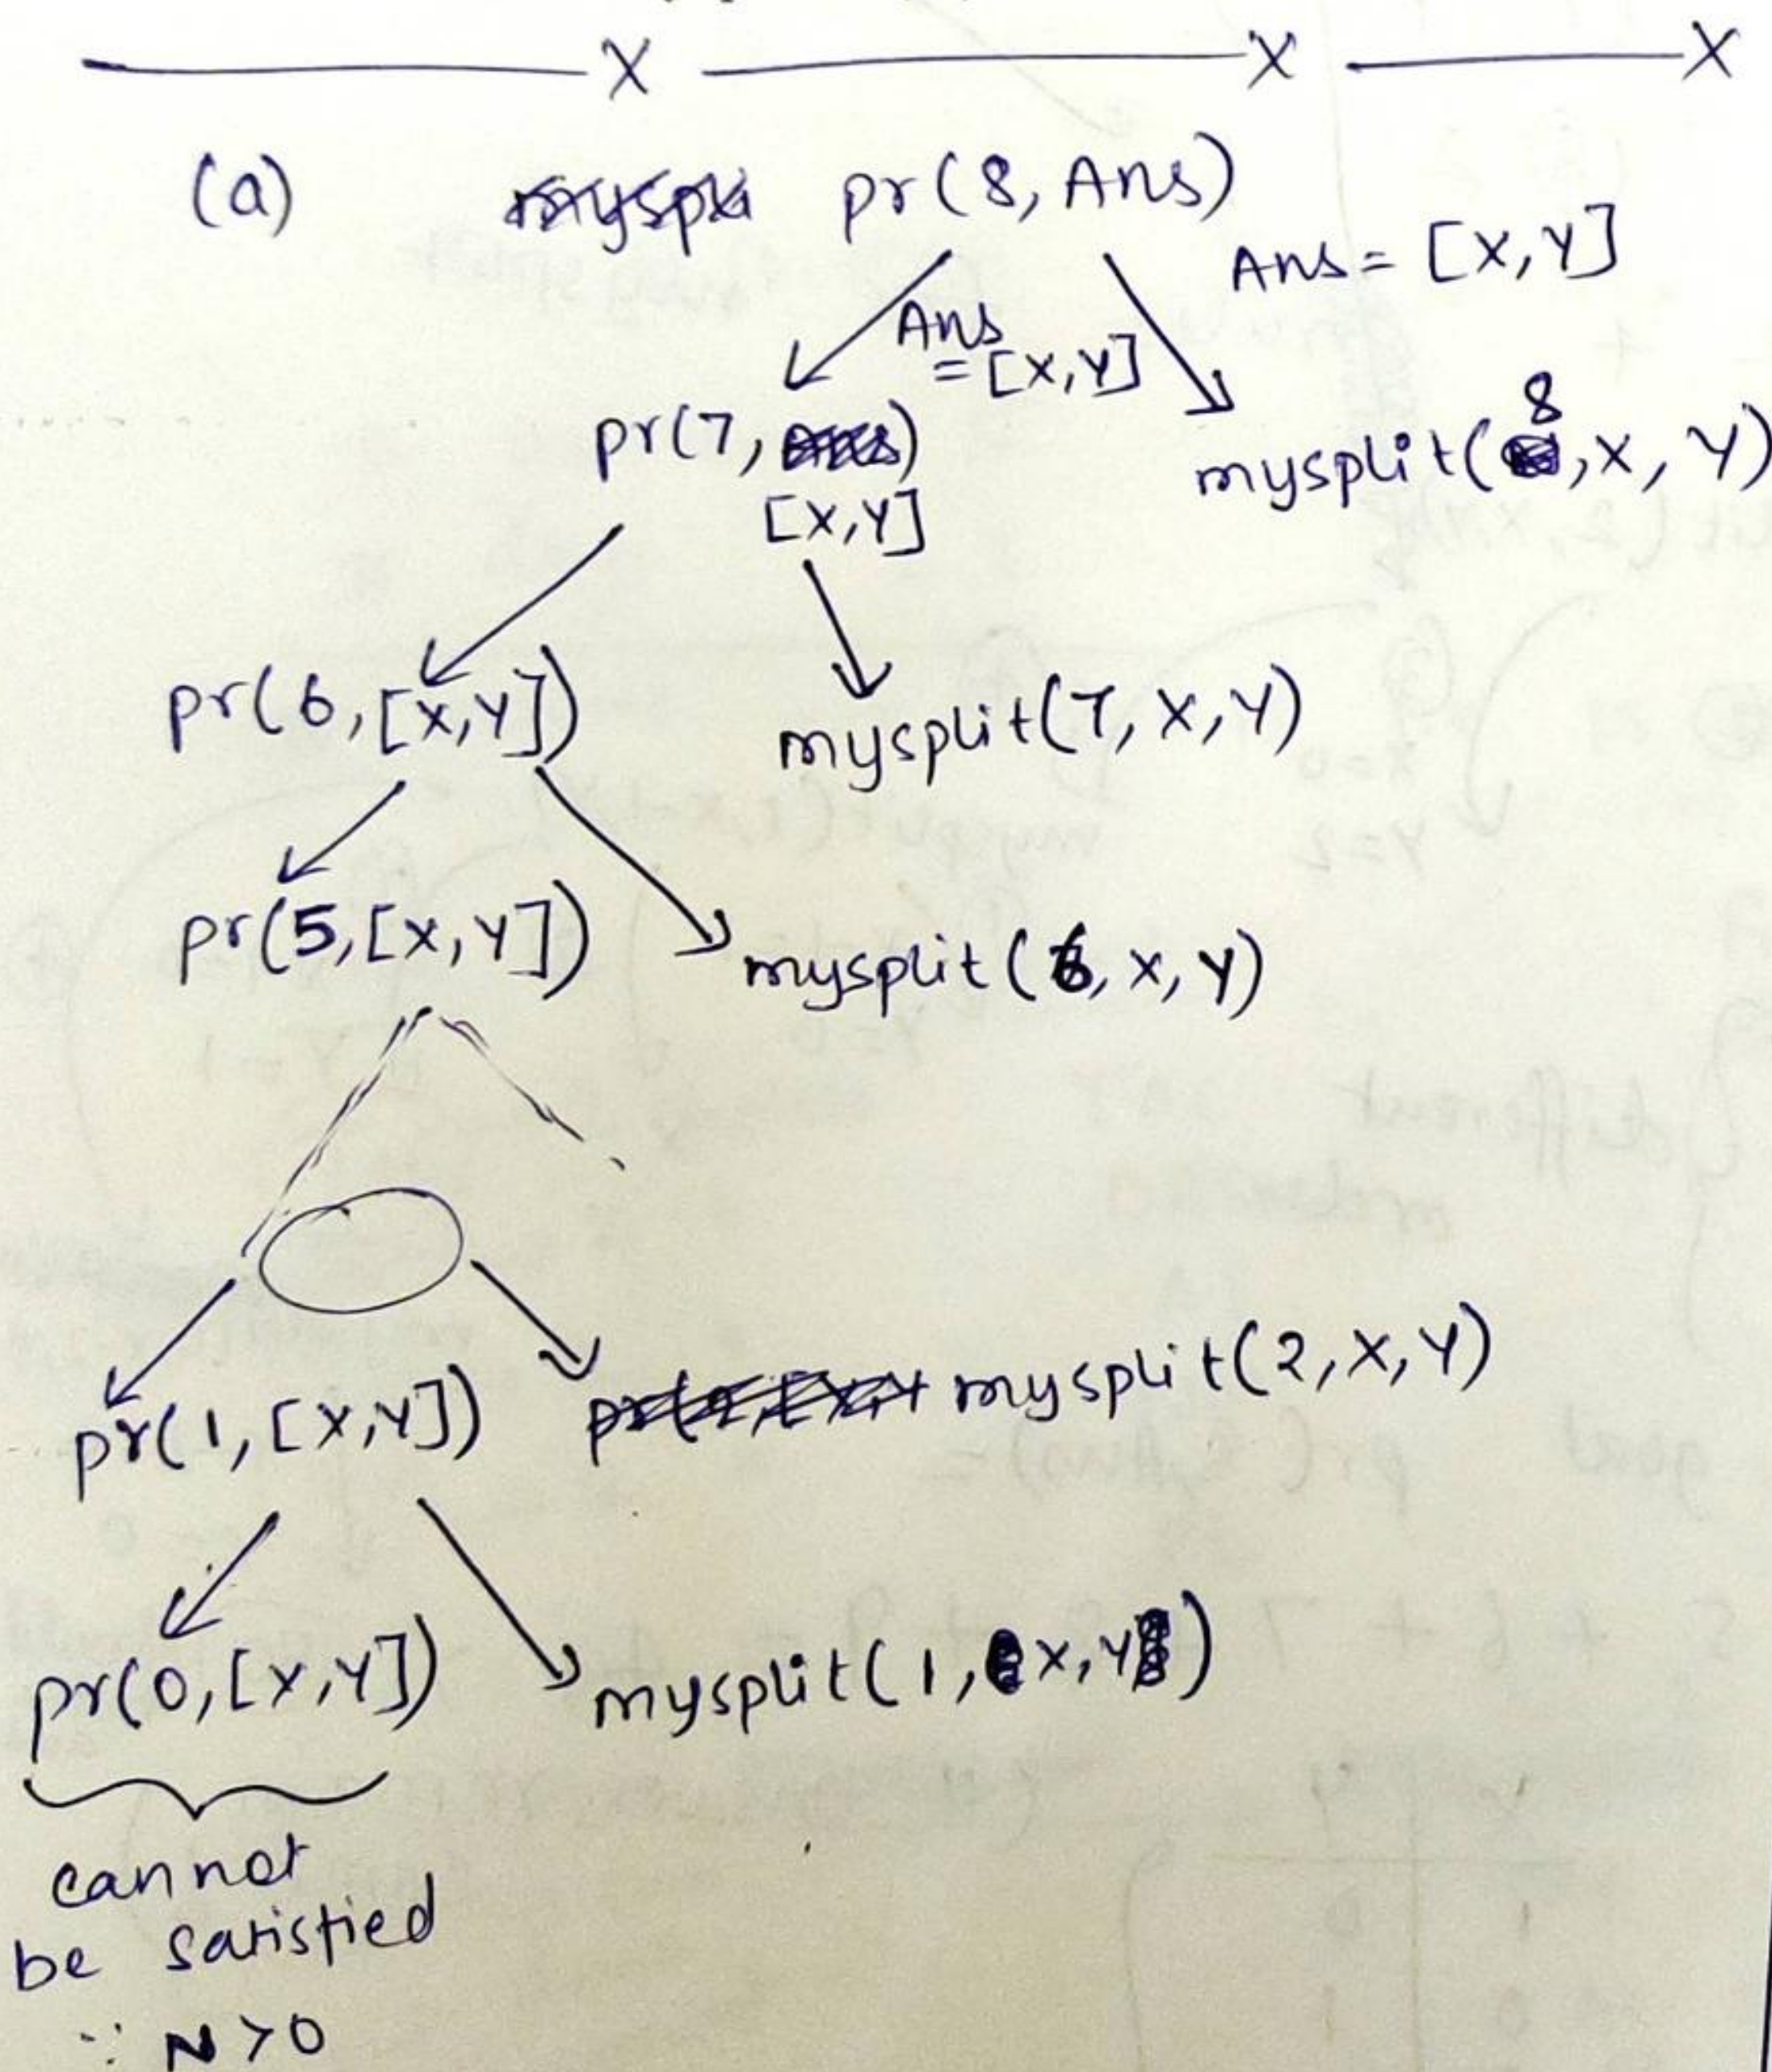

(a) How many answers will be generated for the goal $\text{pr}(8, \text{Ans})$? List the first 8 answers.

$$\Rightarrow 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 = (1 + 2 + \dots + 9) - 1$$

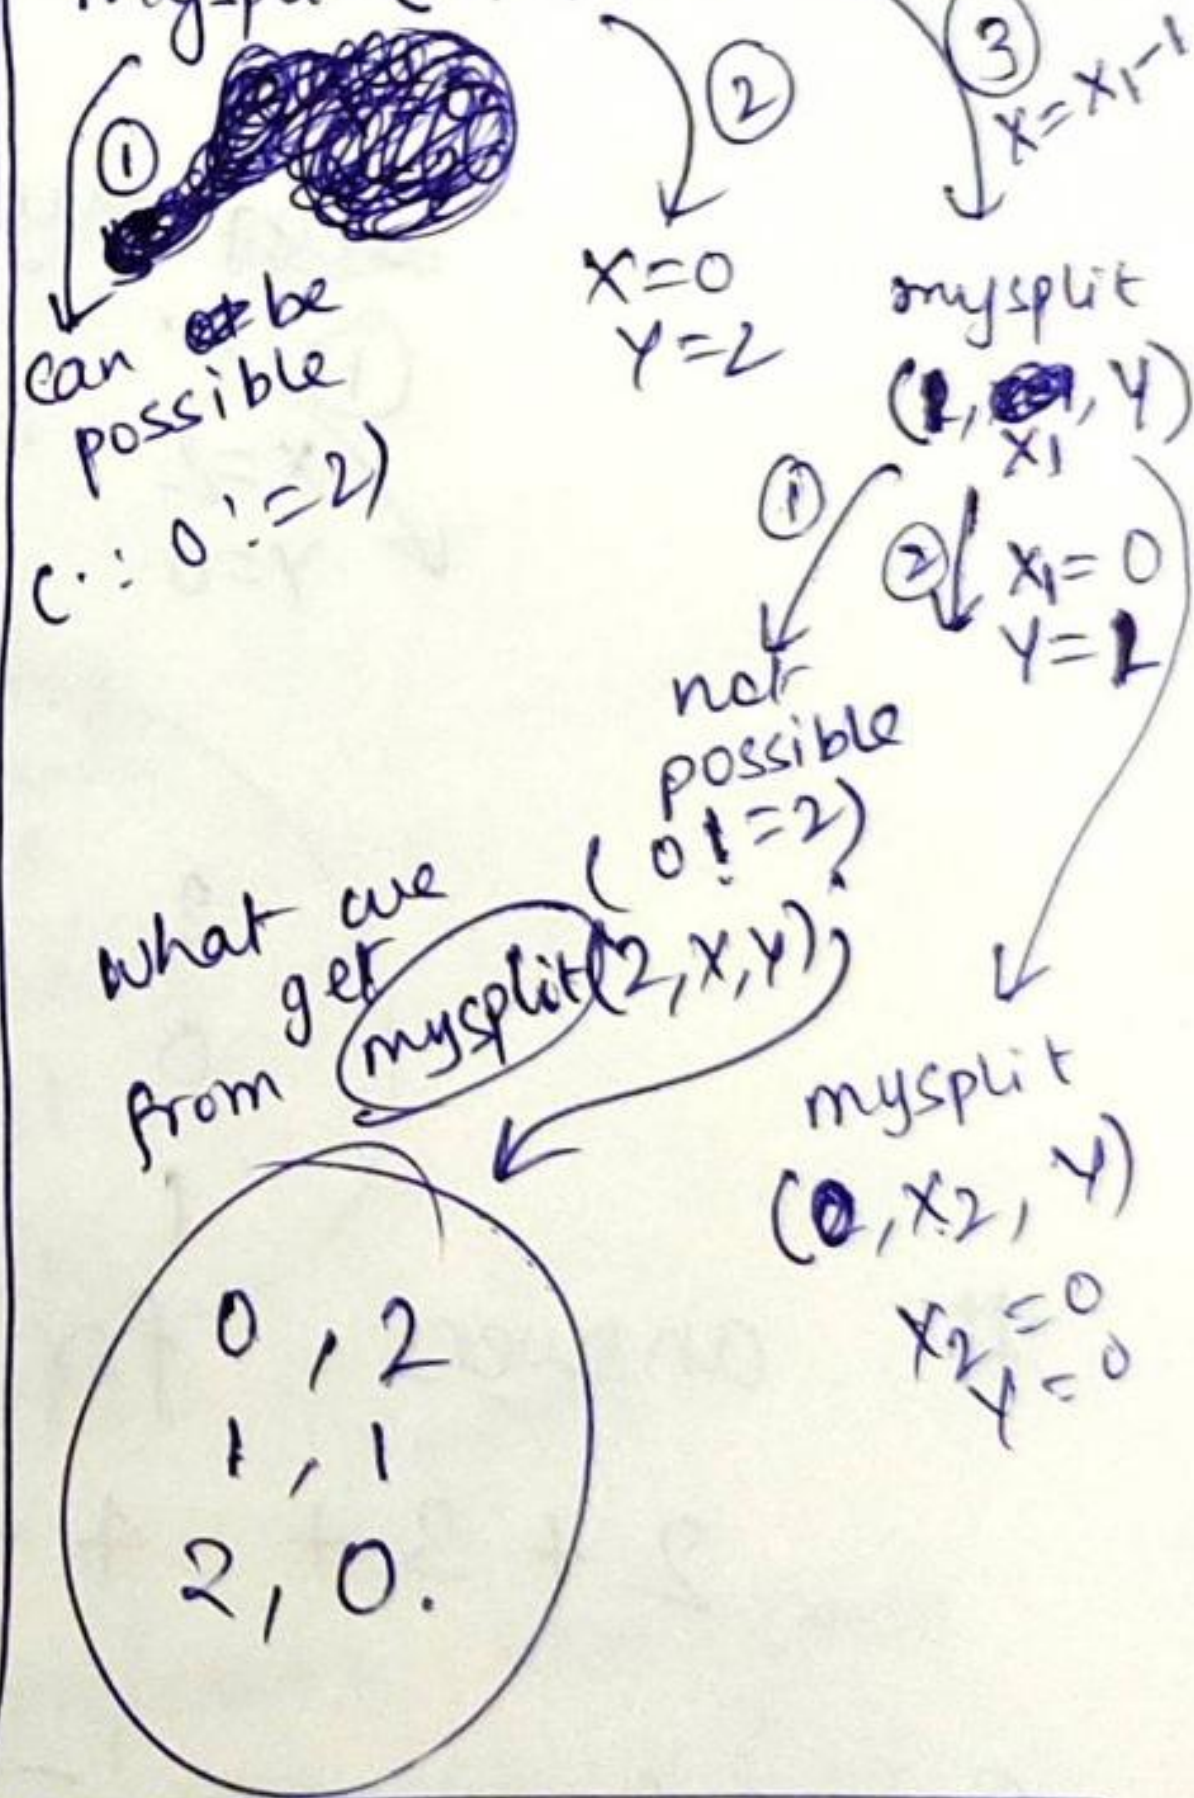

(b) Repeat previous part if the following line is added at the top of the file.

$\text{mysplit}(N, N, 0) :- N > 0.$

$$= \frac{9 \times 10}{2} - 1 = 45 - 1 = 44$$

Let us understand what mysplit does with the help of an example :-
 $\text{mysplit}(2, X, Y)$

from $\text{mysplit}(2, X, Y)$ we get \rightarrow
 $X=0, Y=2$
 $X=1, Y=1$
 $X=2, Y=0$

3(a). # answers for goal $pr(8, Ans) =$
 $2 + 3 + 4 + 5 + 6 + 7 + 8 + 9$
 $= 44$

First 8 answers \rightarrow

	X	Y
①	0	1
②	1	0
③	0	2
④	1	1
⑤	2	0
⑥	0	3
⑦	1	2
⑧	2	1

(15)

3(b). Now we have 4 rules for mysplit

~~my~~ mysplit(2, x, y)

① $x=2$
 $y=0$

② x

③ $x=0$
 $y=2$

④

mysplit(1, x-1, y)

① $x-1=1$
 $y=0$

② x

③ $x-1=0$
 $y=1$

④

different order

2	0
0	2
1	1

~~my~~ mysplit(0, x-2, y)

$x-2=0$
 $y=0$

answers for goal $pr(8, Ans) =$

$2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 = 44 \times$ (80) should be the ans

First 8 answers :-

X	Y
1	0
0	1
2	0
0	2
1	1
3	0
0	3
1	2

(# answers remain same !)

(change in order)

\rightarrow few incorrect answers.

(3)

4. (20 marks) CSE department wants to offer 5 courses each with 3 lecture slots per week (55 mins each) on Mon, Wed, Friday. Course names and starting times are ToC (8am), DBMS (8.30am), AI (9am), NW (9am), PL (9.30am). Only 3 professors are available (SB, PB, GS) to run courses. SB can teach ToC, AI, PL, DBMS. PB can teach DBMS, NW, PL. GS can teach ToC, AI, NW. Formulate this as a Constraint Solving Problem and draw the constraint graph below clearly. Solve this problem systematically (need not show the steps) and list all feasible assignments.

16

understanding the constraint:-

SB:-

3 professor

SB

PB

GS

ToC, AI, PL, DBMS

DBMS, NW, PL

ToC, AI, NW

courses = 5

days = 3

lectures = $5 \times 3 = 15$ i.e. 15 slotsMon

ToC → 2 choices
 DBMS → 2 "
 AI → 2 "
 NW → 2 "
 PL → 2 "

wed

ToC
 DBMS
 AI
 NW
 PL

Friday

ToC
 DBMS
 AI
 NW
 PL

Assumption

(Note this can be put down as a constraint as well)

No 2 professors can teach the same course (i.e. AI cannot be taught by SB on Monday and by GS on Friday).

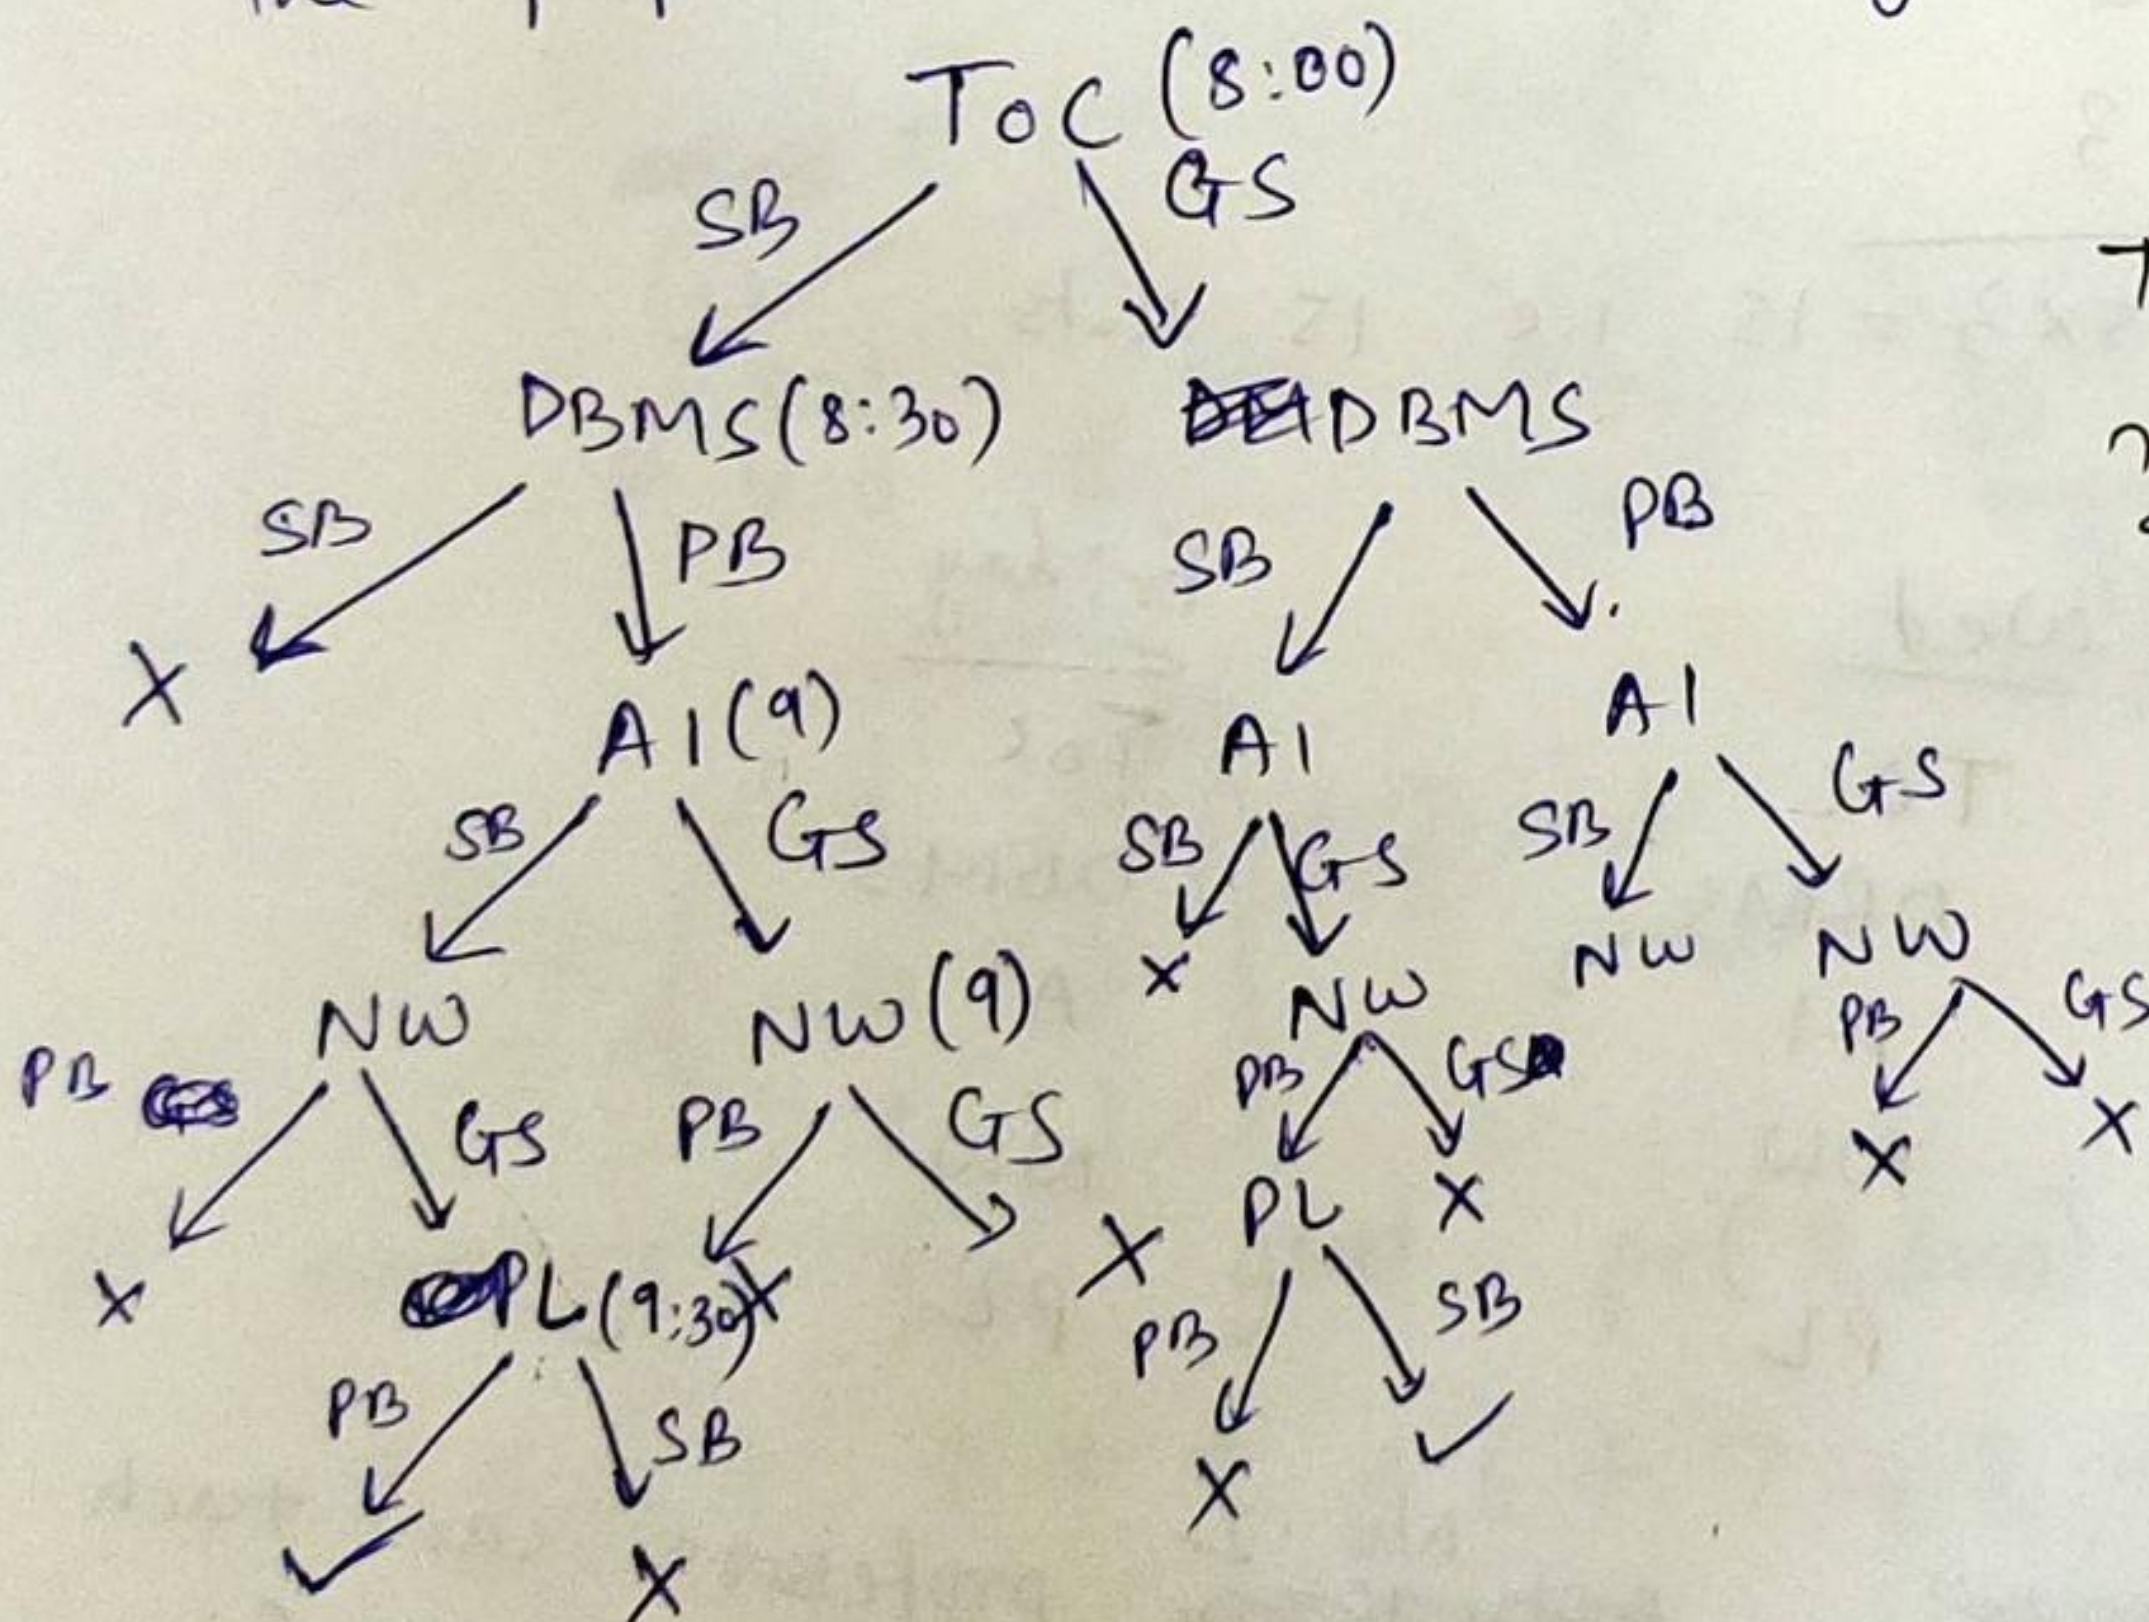

Hence, the ~~no~~ number of ^{possible} distinct combinations of assignments = $2^5 = 32$. Are they all feasible? No!

~~Feasible assignments~~

If SB takes ToC at 8 then he ~~can~~ cannot take DBMS at 8:30 since lecture lasts for 55 mins.

For SB, ~~if~~ he ~~can~~ takes ToC ^{at 8} then DBMS has to be taken by PB at 8:30.

For this, we can formulate a tree as shown below →
What is the constraint here? The fact that every slot needs to be assigned one ~~the~~ professor and that the professor cannot be assigned any 2 overlapping slots.

TA's Remark:

? No constraint graph

One more feasible soln. exists:

GS → TOC, NW
SB → AI
PB → DBMS, PL

One feasible assignment:-

TOC → SB
DBMS → PB
AI → SB
NW → GS
PL → PB

TOC → GS
DBMS → SB
AI → GS
NW → PB
PL → SB

(16)

5. (20 marks) Consider the following answer set program stored in file cc.lp.

```
coin(1;3;5).
1 {used(I,0..m/I)} 1 :- coin(I).
:- not m #sum{I * J : used(I,J)} m.
#show used/2.
```

(17)

→ coin change problem

Explain briefly but clearly what this program will do. If run as - *clingo 0 -c m=10 cc.lp* - what will be the output?

The program calculates the ~~amount~~^{number} of coins (that is in discrete values of denomination 1, 3 and 5) and finds the correct combinations assuming infinite supply of every coin such that the total amount of the coins adds up to the sum. (here the sum = 10). (5)

one clear naive combination is using 2 coins of 5 to make 10.

So, the ~~output~~ output for this combination will be corresponding to

used(5,2), used(3,0), used(1,0).

used(i,j) → 'i' denotes the denomination of coin used to make the change
'j' denotes the number of i-denomination coins required to make the change.

10{1,3,5}

9{1,3,5}

10{3,5}

8{1,3,5}

9{3,5} X

7{3,5}

10{5}

7{1,3,5}

8{3,5} ✓

4{3,5} X

7{5} X

5{5}

0{5} ✓

4{1,3,5}

5{3,5} ✓

3{3,5}

0{1,3,5} ✓

→ Coin change problem formulated as a tree
At every node, we have 2 choices:-
① Pick the coin and make change
② Discard the coin completely

Output :-

- ① ~~used~~ used(5,2), used(3,0), used(1,0). ✓
- ② used(5,1), used(3,1), used(1,2). ✓
- ③ used(5,1), ~~used(3,0)~~ used(3,0), used(1,5). ✓
- ④ ~~used(5,0)~~ ^{used(5,0)}, ~~used(3,1)~~ used(3,1), used(1,7). ✓
- ⑤ ~~used(5,0)~~ used(5,0), used(3,0), used(1,10). ✓

TA's remark :

(12)

Two more feasible solns possible :

• used(5,0), used(3,2), used(1,4)

• used(5,0), used(3,3), used(1,1)
